Your Comments: I have serious concerns about the changing of voltage ratings terminology ES1, ES2 and ES3. I can see this being a problem with techs used to the existing terminology, ELV/SELV is pretty much common around the world, certainly is with UK, and I think it would be a huge mistake to go changing this, techs used to ELV/SELV/TNV will have to stop and question what it is they are dealing with. ES what?, when existing terminology is crystal clear and speaks for itself. I consider this a bad move and hope that the law makers think of the every day techs out there in the field that have to deal with this, and that the decision is reversed, therefor keeping the existing ELV SELV and TNV terminology. Thanks
